

OH5A073-14.0-18.0

Features

- Miniaturization, light weight
- High product consistency
- High reliability
- Customizable
- Suitable for aviation, aerospace, radar, electronic countermeasure, microwave communication, microwave test fields

Description

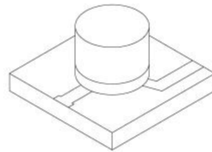

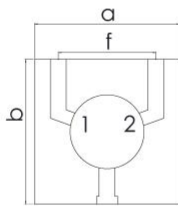

The product named OH5A073 is high-performance microstrip circulator that plays a role in impedance matching and decoupling in integrated circuits. It provides functions such as unidirectional transmission and signal processing, featuring a simple production process suitable for microwave hybrid integrated circuits.
